

## **Assignment 8: ADF Data Flow 3 Question (Tough)**

### **Advanced Questions**

1. Create a pipeline to copy the customer data from csv file to SQL table which has only 3 columns. While copying the data, ensure that copy all the rows where custid is odd number. Also check if cust id exist in table then update it.

File attached with question.

Table: Create dummy table with column (CID, Name, mailid)

Insert dummy row with id 1,3,5,7,9,8,10

2. Create a pipeline to implement the SCD Type 3 example using the Dataflow.

3. Create a pipeline to remove the duplicate record available in the CSV file and save it as JSON file.a
